

2-Function Currency Checker

Portable device works 2 ways – UV Light and Magnetic Ink Sensor

UV light locates security stripes on US bills
Push the top button to turn on the blue UV light and locate the security stripe that can be found on most bills. Each strip is coated with special UV ink that turns a different color when subjected to UV light:

\$100 - Red	\$ 50 - Yellow	\$ 20 - Green
\$ 10 - Orange	\$ 5 - Blue	

Handy, double-duty counterfeit detector

Sensor chirps when it detects magnetic ink
Legal bills are printed with authenticating magnetic ink on specific areas, indicated on the diagram at left. Press the side buttons to activate the Magnetic Ink Sensor, and the device chirps when it detects magnetic ink.

Use the UV light to check credit cards, traveler's checks and other legal documents
All major credit cards have letters or an image printed on the front of the card in UV ink for security – as with traveler's checks, driver's licenses, passports and other legal documents.

Use the MINI-UV light to check printed receipts
POS receipts can now be printed with authenticating UV inks which show when exposed to UV light.

Attached to a nylon band, this handy, dual-function device can go anywhere with you for instant verification and dependable counterfeit detection.
